Topton N.C., 28781

The Board of Directors at Caledon Shores Condominium understands that you are the inventor of the revetment that protects the Caledon Beachfront and dune from erosion. The Board unanimously thanks you for developing this system in that it provided unique protection to our property during the recent double hurricane hits of Frances and Jeane.

The properties to our adjacent north and south lost virtually all their beachfront, while the Caledon revetment provided essentially full containment from the ocean action from the hurricanes. This is remarkable in that winds were clocked at close to 150 MPH during Jeanne.

The Board also understands that you were tireless in your efforts to get permission from the State of Florida to install the revetment in 1989. Again we thank you for these efforts. We understand that Herb Weismiller who was the President of the Board at Caledon at this time supported your concept and equally committed himself to the revetment installation. This was done despite significant resistance from other owners. We wish to express our thanks for his contribution and foresight as well.

The Caledon Shores Board of Directors

President
